Question **1**

Correct

Mark 1.00 out of 1.00

Flag question

Develop a Python program to read a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to read.
2. **Output:**
   - The content of the specified line.

input1.txt:

Line one.
Line two.
Line three.
Line four.

For example:

Input	Result
input1.txt 3	Line three.

Answer: (penalty regime: 0 %)

```
filename = input()
line_number = int(input())

with open(filename, "r") as file:
    lines = file.readlines()

    if 1 <= line_number <= len(lines):
```

Line four.

For example:

Input	Result
input1.txt 3	Line three.

Answer: (penalty regime: 0 %)

```
filename = input()
line_number = int(input())

with open(filename, "r") as file:
    lines = file.readlines()

    if 1 <= line_number <= len(lines):
        print(lines[line_number - 1].strip())
    else:
        print("Invalid line number")
```

	Input	Expected	Got	
✓	input1.txt 3	Line three.	Line three.	✓
✓	input2.txt 3	Line C.	Line C.	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **2**

Correct

Mark 1.00 out of 1.00

Flag question

Write a Python program to append a new line at a specific position in a text file, shifting existing lines down.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to insert the new line at.
   - New content for the new line.
2. **Output:**
   - The updated file with the new line inserted at the specified position, shifting the existing lines down in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  3

  Inserted line..

Output:

Line one.
Line two.
Inserted line.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`input1.txt`
	`3`
	`Inserted line.`
		`Line one.`
		`Line two.`
		`Inserted line.`
		`Line three.`
		`Line four.`

		Line three. Line four.

Answer: (penalty regime: 0 %)

```
filename = input().strip()
line_number = int(input())
new_line = input()

with open(filename, "r") as file:
    lines = file.readlines()

# Ensure every existing line ends with a newline
lines = [line.rstrip("\n") + "\n" for line in lines]

# Insert the new line at the specified position
lines.insert(line_number - 1, new_line.rstrip("\n") + "\n")

# Write the updated content to output.txt
with open("output.txt", "w") as file:
    file.writelines(lines)

```

	Test	Input	Expected	Got	
✓	with open('output.txt', 'r') as file: text = file.read() print(text)	input1.txt 3 Inserted line.	Line one. Line two. Inserted line. Line three. Line four.	Line one. Line two. Inserted line. Line three. Line four.	✓
✓	with open('output.txt', 'r') as file: text = file.read() print(text)	input2.txt 4 Inserted line D.	Line A. Line B. Line C. Inserted line D.	Line A. Line B. Line C. Inserted line D.	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **3**

Correct

Mark 1.00 out of 1.00

Flag question

Create a Python program to find the longest word in a text file.

- **Input:**
  - A text file containing multiple lines of text.
- **Output:**
  - The longest word in the file.

For example:

Input	Result
input1.txt	Longest word: containing

Answer: (penalty regime: 0 %)

```
filename = input().strip()

with open(filename, "r") as file:
    text = file.read()

words = text.split()

if words:
    longest_word = max(words, key=len)
    print("Longest word:", longest_word)
else:
    print("No words found")
```

Input	Result
input1.txt	Longest word: containing

Answer: (penalty regime: 0 %)

```
filename = input().strip()

with open(filename, "r") as file:
    text = file.read()

words = text.split()

if words:
    longest_word = max(words, key=len)
    print("Longest word:", longest_word)
else:
    print("No words found")

```

	Input	Expected	Got	
✓	input1.txt	Longest word: containing	Longest word: containing	✓
✓	input2.txt	Longest word: thousand	Longest word: thousand	✓
✓	input3.txt	Longest word: supercalifragilisticexpialidocious	Longest word: supercalifragilisticexpialidocious	✓

Question **4**

Correct

Mark 1.00 out of 1.00

Flag question

Develop a Python program to read a text file and count the total number of words in the file.

Description:

1. **Input:**
   - A text file containing several lines of text.
   - File name you should get as input.
2. **Output:**
   - The total number of words in the file.

For example:

Input	Result
input2.txt	Total words: 14
input3.txt	Total words: 15

Answer: (penalty regime: 0 %)

```
1
2  filename = input().strip()
3
4  with open(filename, "r") as file:
5      text = file.read()
6
7  words = text.split()
8
9  print("Total words:", len(words))
10
```

input2.txt	Total words: 14
input3.txt	Total words: 15

Answer: (penalty regime: 0 %)

```
filename = input().strip()

with open(filename, "r") as file:
    text = file.read()

words = text.split()

print("Total words:", len(words))
```

	Input	Expected	Got	
✓	input1.txt	Total words: 6	Total words: 6	✓
✓	input2.txt	Total words: 14	Total words: 14	✓
✓	input3.txt	Total words: 15	Total words: 15	✓

Question **5**

Correct

Mark 1.00 out of 1.00

Flag question

Create a Python program to delete a specific line from a text file based on a given line number.

Description:

1. **Input:**
   - A text file with multiple lines.
   - A line number to delete.
2. **Output:**
   - The updated file with the specified line removed in file "output.txt".

Example:

- **Input File Content:**

  "Line one.
  Line two.
  Line three.
  Line four."
  2

  Updated line two.

Output:

Line one.
Line three.
Line four.

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	2
		Line one.
		Line three.
		Line four.

Answer: (penalty regime: 0 %)

```
1
2 filename = input().strip()
3 line_number = int(input())
```

print(text)		Line four.

Answer: (penalty regime: 0 %)

```
filename = input().strip()
line_number = int(input())

with open(filename, "r") as file:
    lines = file.readlines()

if 1 <= line_number <= len(lines):
    del lines[line_number - 1]

with open("output.txt", "w") as file:

Question **6**

Correct

Mark 1.00 out of 1.00

Flag question

Develop a Python program to copy the contents of one file to another file.

Description:

1. **Input:**
   - Source file and destination file names.
2. **Output:**
   - The content of the source file copied to the destination file.

For example:

Test	Input	Result

`with open('output1.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	input1.txt
	output1.txt
		This is the source file.
		It contains multiple lines of text.
		Here is another line.

Answer: (penalty regime: 0 %)

```
1
2  source = input().strip()
3  destination = input().strip()
4
5  with open(source, "r") as file:
6      content = file.read()
7
8  with open(destination, "w") as file:
9      file.write(content)
10
```

```python

source = input().strip()
destination = input().strip()

with open(source, "r") as file:
    content = file.read()

with open(destination, "w") as file:
    file.write(content)

```

	Test	Input	Expected	Got
✓	with open('output1.txt', 'r') as file: text = file.read() print(text)	input1.txt output1.txt	This is the source file. It contains multiple lines of text. Here is another line.	This is the source file. It contains multiple lines of text. Here is another line.

Question **10**

Correct

Mark 1.00 out of 1.00

Flag question

Write a Python program to count the frequency of each word in a given text file.

Description:

1. **Input:**
   - String as input.
2. **Output:**
   - A list of words with their corresponding frequency count to be write in a file "output.txt"

Example:

- **Input File Content:**

  apple orange apple banana apple orange

Output:

apple: 3
orange: 2
banana: 1

For example:

Test	Input	Result

`with open('output.txt', 'r') as file:`
`  text = file.read()`
`  print(text)`
	`apple orange apple banana apple orange`	`apple: 3`
		`banana: 1`
		`orange: 2`

Answer: (penalty regime: 0 %)

```
1
2  from collections import Counter
3  import string
4
5  text = input().strip().lower()
6
7  for char in string.punctuation:
8      text = text.replace(char, "")
9
